

*"Tailored Consulting Services for the Energy Industry"*

## Power Supply Services

Finding the most economical methods to meet the electricity demands of electric utility customers is always critical and essential as the industry changes. Whether exploring new options or trying to make the most effective use of current resources, EnerVision can help electric utilities meet their power supply objectives.

EnerVision's Power Supply Consulting Services help utilities:

- ◆ Assess both existing power supply obligations and future requirements;
- ◆ Determine the best mix of resources; and
- ◆ Examine alternate energy options, including renewable energy and energy innovation opportunities.

### EnerVision's Power Supply Services

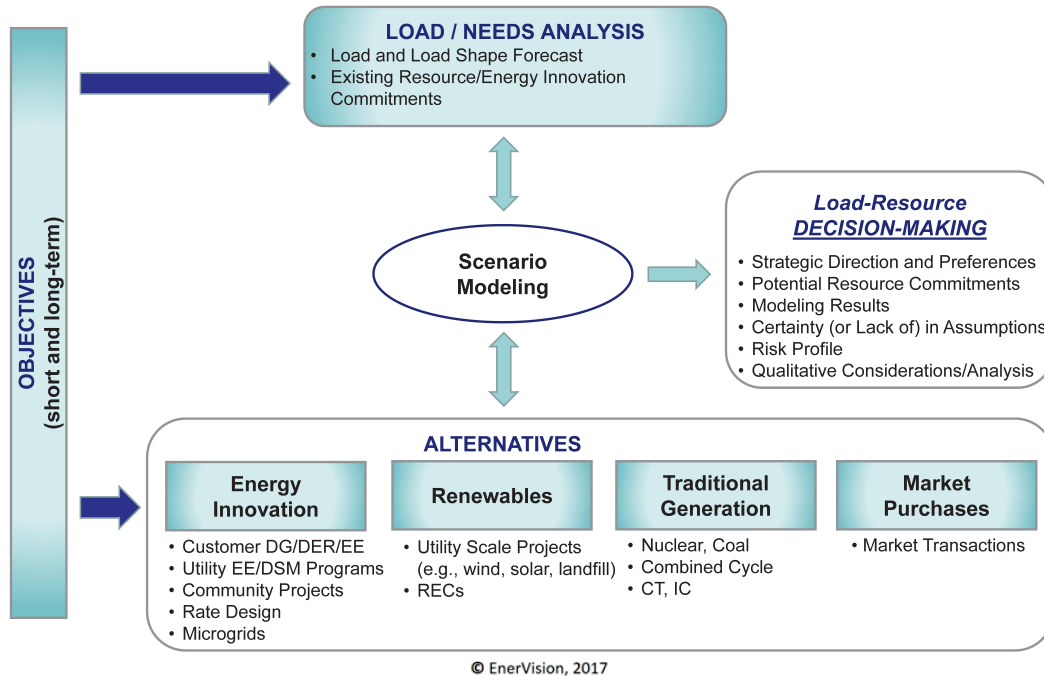

The most important issue for end-consumers is the total dollar amount on their electricity bills. They determine the meaning of **affordability**. Do they know that approximately 60-70% of those bills come from wholesale power supply and related costs?

EnerVision's wheelhouse is understanding and defining strategies for wholesale power supply. Whether utilities are in regional transmission organizations (RTO's) or bilateral markets, opportunities and risks exist in both. And we have experience in both.

Our service offerings include:

- ◆ Assessment of your current power supply situation
- ◆ Intelligence in surround power markets
- ◆ Strategies to achieving affordability
- ◆ Defining your IRP (Total Energy Plan)
- ◆ Running a procurement process
- ◆ Negotiating contracts
- ◆ Administering contracts

## Total Energy Planning Process

For more detailed information about this service, request a copy of EnerVision’s Total Energy Planning brochure.

**EnerVision is regarded as *“Trusted Advisors”* by many of our clients—and strives to attain that status with all clients.**
